

Elixsys Attends World of Coal Ash Trade Show

Bainbridge Island, WA, --- May 11, 2011 --- Elixsys, LLC, announced today that the company's leadership staff is attending the World of Coal Ash (WOCA) Trade Show in Denver, CO.

Approximately 90 million tons of coal fly ash (CFA) is generated by coal-fired electricity plants each year in the U.S. Elixsys has developed a method that removes heavy metals from CFA, and converts it into zeolites. Zeolites are a source material for marketable products such as fertilizer, soil supplements, animal feed stock, adsorbents, detergents, water softeners, and much more.

"Attending WOCA is a significant step for our business," said Troy Niehaus, Elixsys Managing Director. "We're seeing major interest from the industry's coal-powered utilities and fly ash handlers, as well as partnership opportunities with manufacturers who can use our converted coal fly ash as a source material for many different product types. The work we do at the WOCA show will lay a clear path to market. We've had a focused direction for some time now, and the WOCA show will further define our business development for the coming months."

Leonard Passmore, Elixsys Chief Engineer, stated: "With the help of Vignette Creative on Bainbridge Island, we produced a 4 minute marketing video and it has been valuable for conveying the Elixsys message. We've managed to create a buzz regarding our process that has helped draw people to our booth. We have a lot to say about transforming coal fly ash into new sources of revenue, and attendees want to hear it. As planned, this trade show will generate a lot of work for the team,

and we're looking forward to developing the relationships we've started at the WOCA trade show."

David Marsing, Chief Strategy Officer of Eagle Harbor Holdings, Elixsys' parent company, stated: "The Elixsys team is making a successful entrance into coal fly ash industry, specifically with remediation and conversion, and I'm pleased with their results. From all fronts we are being received well with the Elixsys business model, and I expect profitable success soon. The Elixsys team has an extraordinary ability to focus on the objectives and deliver ahead of schedule. We'll see considerable growth with the company in the coming quarters."

About Elixsys, LLC

Elixsys is a wholly owned subsidiary of Eagle Harbor Holdings (EHH), LLC. EHH focuses on a variety of technology markets such as industrial metals recovery/recycling, coal fly ash remediation, automated vehicle situation awareness, and vehicle infotainment. Collectively, EHH engineers are named inventors on more than 200 issued patents, which include technologies that have been installed in tens of millions of vehicles. EHH co-founders, Dan Preston and Joe Preston, are also founders of Airbiquity, Inc. and Medius, Inc, and are considered pioneers in the field of vehicle telematics. Through Airbiquity, Dan Preston and Joe Preston were key players in the evolution of the OnStar digital system. EHH subsidiaries include MediusTech, Elixsys, Chameleon, SenTech Systems, and VehicleTalk.
